

HOSPITAL CENTRE OF ROUBAIX, WOMEN-MOTHER-CHILD UNIT (59)

The new maternity ward of the Victor Provo Hospital Center in Roubaix opened its doors in 2017. The team of design-build worked closely with health professionals to design a modern building, a space for comfort and well-being, integrated in an environmental cause.

The women-mother-child unit is 13 000 m², this ward separated from the hospital is directly linked in case of need, to the operating rooms and to the anaesthesia and post-interventional monitoring facilities of the Victor Provo Hospital center.
