

◆ RESUSCITATION - INTENSIVE CARE

◆ PENDANT WITH SUSPENDED COLUMN ERGO 602 / 302

This combination of the Ergo 600 movable arm with the **Ergo 302** (or 303) column is the ideal solution for a perfect mobile and full safe system for biomedical equipment on a rigid suspended system. This configuration allows a total work station space where the size of the room is limited.

Movable systems can consist of one or two arms for giving total movement to the beds infusion side. Heavy equipment can be placed on the column (ventilation side). This is the ideal solution for resuscitation and intensive care units.

Total safety with static and movable systems.
