

SLIDING SYSTEM

The COLIBRI architectural concept, in its SLIDING CONCEPT version, is the ideal solution for combining all the technical requirements of a treatment area with comfortable, ergonomic lighting, all within a high-end design typically reserved for the finest hotels but adapted for use in healthcare facilities.

SLIDING SYSTEM

TECHNICAL SPECIFICATIONS

- Ambient and task lighting are fundamental to comfort in hotels and to ergonomics in hospitals.
- The panels are removable to allow access at a later date and provide unobstructed access to electrical and medical fluid supply points, as required by the standard. The panels are ventilated for medical fluids.
- The panels are available in three finishes (melamine, laminate or HPL) in M1 grade.
- The wall light can be supplemented by a night light at the base of the panel or as a strip running the full width of the panel.

CUSTOMISATION

- Customise your décor with a choice of over 250 graphic finishes and photo inlays on a durable laminate surface.
- The panels are available in three grades (melamine, laminate or HPL) in M1 and/or antibacterial versions.
- We offer a wide range of finishes (plain, wood, metal, etc.) from some of the world's leading manufacturers.
